Education

Vivekanand Education Society's Institute of Technology, Mumbai

BE Informational Technology Engineering

April 2026

Relevant courses: Data Structures and Algorithms (C/C++), Design and Analysis of Algorithms, Machine Learning, Management Systems (DBMS), Operating Systems, Computer Networks, Web Development

Technical Skills

- **Languages:** Python, C++, Java, JavaScript, SQL
- **Web Development:** HTML, CSS, JavaScript, React.js, Node.js, MongoDB, Express.js
- **Machine Learning:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Transformers
- **Database:** MySQL, PostgreSQL
- **Tools & Platforms:** Git, GitHub, VS Code, Android Studio, PyCharm, Google Colab, LeetCode, Jupyter, Google Colab
- **Other:** REST APIs, TF-IDF, Cosine Similarity, Regression Techniques

Projects

RecruitML – Resume Screening and Recommendation System

- **Tools:** Python, HTML/CSS, Logistic Regression, Scikit-learn, GitHub
- Built a ML-based resume screening tool to match resumes with job descriptions and generate relevance scores.
- Implemented Logistic Regression for classification and designed a web interface for file upload and job-match display.
- Developed a recommendation engine that suggests suitable job roles based on resume content.
- Reduced manual screening effort by up to 60% on test dataset of 50 resumes.

TrendTurnover – Eco-Fashion Marketplace (MERN Stack)

- **Tools:** React.js, Node.js, Express.js, MongoDB
- Designed a full-stack web platform to facilitate clothing resale and donation for environmental sustainability.
- Led frontend development using React and created dynamic forms for sellers and NGOs.
- Implemented donation feature allowing users to send clothes directly to verified NGOs.
- Promoted sustainable fashion practices through a digital marketplace model.

Legal Chatbot

- **Tools:** MERN Stack, Python Machine Learning Libraries, FastAPI.
- Developed a legal chatbot that guides users through initial actions related to legal issues using conversational AI.
- Integrated state-of-the-art NLP models, including **Legal-BERT** for intent classification, **FLAN-T5** for response generation, and **MiniLM (Sentence Transformers)** for semantic similarity and query ranking.
- Implemented real-time storage of user interactions in MongoDB to support continual model fine-tuning and feedback-driven improvements.
- Designed a chat-based, user-friendly interface with React.js, emulating modern messaging apps, and built a scalable backend with FastAPI for efficient query processing and model inference.

Hackathon

HackWave | National-Level 24-hour Hackathon | Project: ML-Powered Classification & Prediction Tool

- Preprocessed raw training/testing datasets using Excel and Python.
- Implemented and validated a Random Forest classifier to establish baseline performance.
- Collaborated in a 4-member team, focusing on data wrangling, model validation, and rapid prototyping under time constraints.
- Delivered a working ML prototype achieving 80%+ accuracy in classification.

Hack-AI-Thon | Institute-Level ML Hackathon | Project: Predictive Model Deployment with Interactive Frontend

- Developed the frontend interface to demo model results and user input handling.
- Contributed to data preprocessing, normalization, and train-test partitioning.
- Helped design the evaluation pipeline to assess model performance.
- Enabled real-time input testing for users via the interface, enhancing UX.

Experience

Nomura KakushIN 9.0 - Finalist | Project: ShoreCare: Website for NGO-Volunteer Cooperation in Beach Cleaning Drives.

- Contributed to **5+ core features**, improving operational efficiency and engagement for NGOs and volunteers
- Built the **CSR Partnership Toolkit** with automated impact dashboards and sponsor reports.
- Developed the **Beach Mapping** feature using a custom *Beach Score* (based on waste volume, tourist density, and local activities) to prioritize multiple cleanup sites.
- Designed **Volunteer Management** and **Skill-Based Role Tagging** systems, enhancing volunteer engagement and task distribution.
